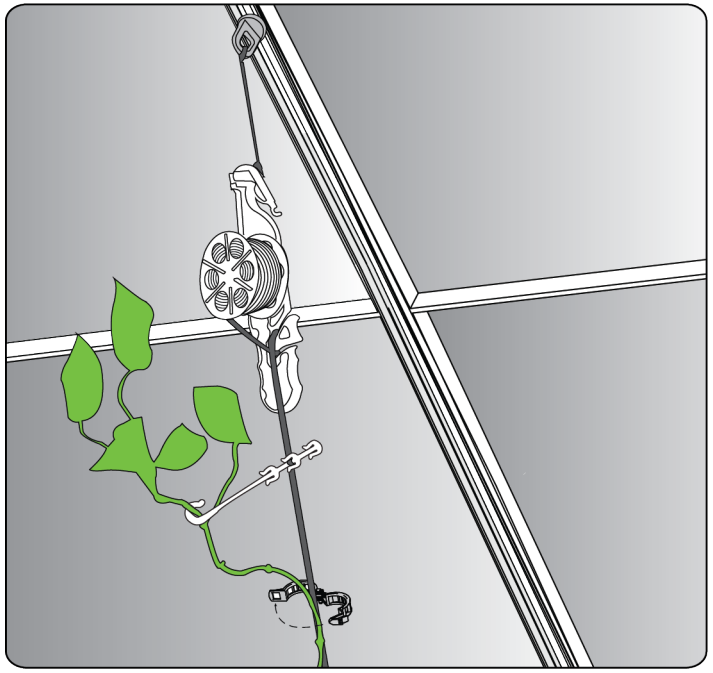
Trellising Kit Instructions



Professional support system for vining plants

© 2013-2026 Grandio Greenhouses, Backyard Living Source Inc. All rights reserved.
Version 1.2, June 2026

Included Components

Image	Component	Qty	Description
	Roller Plast Assembly	6	Ideal for tomatoes, cucumbers, and vining plants. Features a unique spool-lock design that prevents slipping for smooth, controlled lowering of vines.
	Stem Holder	12	Supports plant stems to prevent drooping and damage. UV-protected and ideal for managing difficult-to-support vines and stems.
	Standard Clip 23mm	24	Quickly secures plants to twine. Open design promotes excellent air circulation to help prevent fungus. Quick-release for easy repositioning and reuse across seasons.
	Two-Piece Radial Hooks	12	Securely supports vines and prevents breakage. Easy-to-install design fits wires up to 3.75 mm in diameter.
	Super J Double Cluster Support Hooks	12	Provides targeted support for fruit clusters. Helps prevent stem damage. Overall length: 3.5”.
	Plant Hanger Clip	6	Securely clips into the channels in the roof frame on Grandio Greenhouses for overhead trellising.

Installation Instructions

Follow these steps to set up your trellising system safely and effectively

Step 1: Assemble the Roller Plast System

1.1 Unwind about 12 inches (30 cm) of twine from the Roller Plast Assembly. Cut approximately 8 inches (20 cm) of twine to create a secure knot. Form a loop connecting the Plant Hanger Clip and the Roller Plast Assembly, then tie the knot firmly, see **A** . Wrap the twine around the bottom of the Roller Plast Assembly to lock it securely in place, see **B** .

1.2 Insert the Plant Hanger clip into the channel in the greenhouse roof frame, see **C** . Gently slide it upward and rotate clockwise (to the right) until it locks firmly into position.

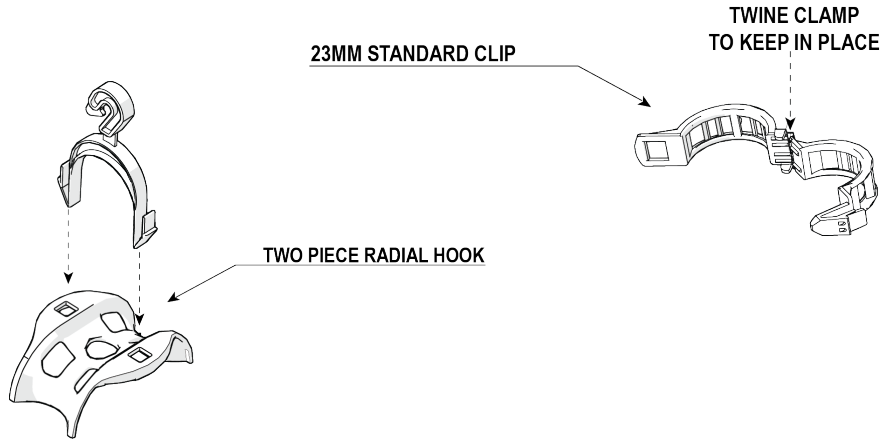
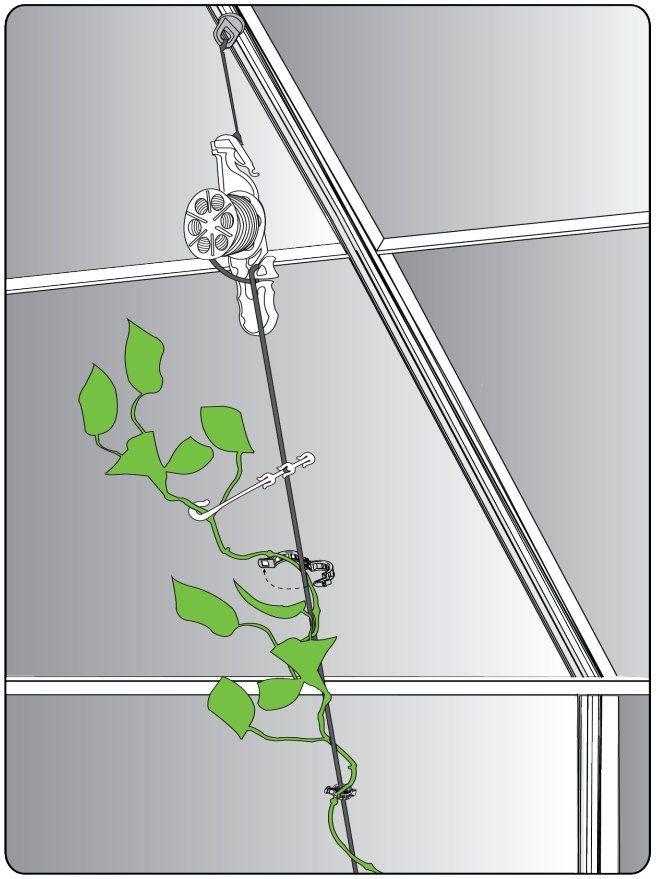
Step 2: Position and Secure Your Plants

2.1 Locate the vine you wish to support. Unwind the twine from the roller down to the base of the plant. Wrap the twine around the Roller Plast Assembly to lock it in place at the desired height.

2.2 Select the appropriate support for your plant:

- Use the 23mm Standard Clip or Two-Piece Radial Hook to attach the vine to the twine.
- Gently wind the plant vine counter-clockwise around the twine. This consistent direction makes it easy to track growth as the plant develops.
- Add more clips as the plant grows. Use Super J Double Cluster Support Hooks for fruit clusters and Stem Holders to support main stems as needed.





Tips for Best Results

- Start supporting plants early, before stems become too heavy or brittle.
- Check and adjust clips regularly as plants grow rapidly.
- The roller system allows you to lower plants safely for harvesting or pruning without damaging vines.
- All components are reusable — clean and store them properly between seasons.
